SUMMARY

Motivated 3rd year Software Engineering student with strong hands-on experience in full-stack development (React, Spring Boot, PostgreSQL). Built and deployed production-level projects with real users.

EDUCATION

B.Sc. in Software Engineering 01/2024 – Present
Braude Academic College
GPA : 85.5

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Object-Oriented Programming.

FullStack AI Developer 01/2026 – 12/2026
HackerU

Upcoming Modules: Focusing on Full-Stack architecture and planned specialization in **AI Engineering (LLMs, LangChain, and Python-based microservices)**.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, C, Golang, SQL.
Web: HTML/CSS, React, Next.js 16.
Backend: Spring Boot, JWT, WebSockets, SQLC, Goose.
Databases: PostgreSQL, MySQL, MongoDB.
Tools: Git, Docker, VS Code, Visual Studio.
Concepts: RESTful APIs, System Design, Client-Server Architecture, Concurrency, Middleware Design.

PROJECTS

Israel Conflict Monitor (ICM) | Go · Next.js · PostgreSQL · SQLC · Chi 02/2026 – 03/2026
Website 🔗 | Source Code 🔗

- **Full-Stack Architecture:** Developed a live intelligence platform with a Go backend/scraper and Next.js 16 frontend.
- **Concurrent Scraper:** Engineered a worker-pool using **goroutines** and **WaitGroups** to fetch RSS feeds from 20+ sources.
- **Type-Safe Data:** Designed a relational schema with **Goose** migrations and used **SQLC** for compile-time safe query generation.
- **Authentication & Security:** Built a custom API Key system with middleware and implemented **Next.js validation** for strict user constraints
- **High-Performance Search:** Leveraged **PostgreSQL GIN indexes** for instant, case-insensitive discovery across thousands of archived posts.
- Deployed using **Docker**, with the frontend on **Vercel** and backend on **Render**.

YarkaMarket | React · Spring Boot · PostgreSQL · JWT · WebSockets 08/2025 – 10/2025
Website 🔗 | Source Code 🔗

- Developed a **full-stack marketplace** web application where users can sign up, create product listings, and interact securely.
- Implemented **JWT authentication and authorization** to secure user accounts and protected routes.
- Built **REST APIs with Spring Boot** and integrated a PostgreSQL database.
- **Real-time messaging using WebSockets** with email notifications for messages.
- Deployed using **Docker**, with the frontend on **Vercel** and backend on **Render**.

CERTIFICATES

- AWS Cloud Practitioner Essentials
